

# **Offset Pipelined Scheduling: Conditional Branching for CGRAs**

**Aaron Wood and Scott Hauck  
University of Washington**

# Motivating Example

```
while (1) {  
    s = t;  
    for (int i = 0; i < SIZE; i++) {  
        x <? InputStream;  
        s = s + x;  
        a[i] = x;  
    }  
    for (int j = 0; j < SIZE; j++) {  
        y = a[j];  
        t = y ^ t;  
        y = y * PRIME;  
        y = y & 0x000000FF;  
        y = BASIS ^ y;  
        y = y / s;  
        OutputStream <! y;  
    }  
}
```

# Modulo Schedule

- II of 3 using 8 resources
- Modal operations waste issue slots

Cycle	ALU0	ALU1	ALU2	ALU3	ALU4	ALU5	ALU6	ALU7
0	R	^	φ	<?	+	<		>=
1	*	/	^	+	W		φ	φ
2	&	<!	φ	φ		φ	φ	φ

Mode 1 Operations

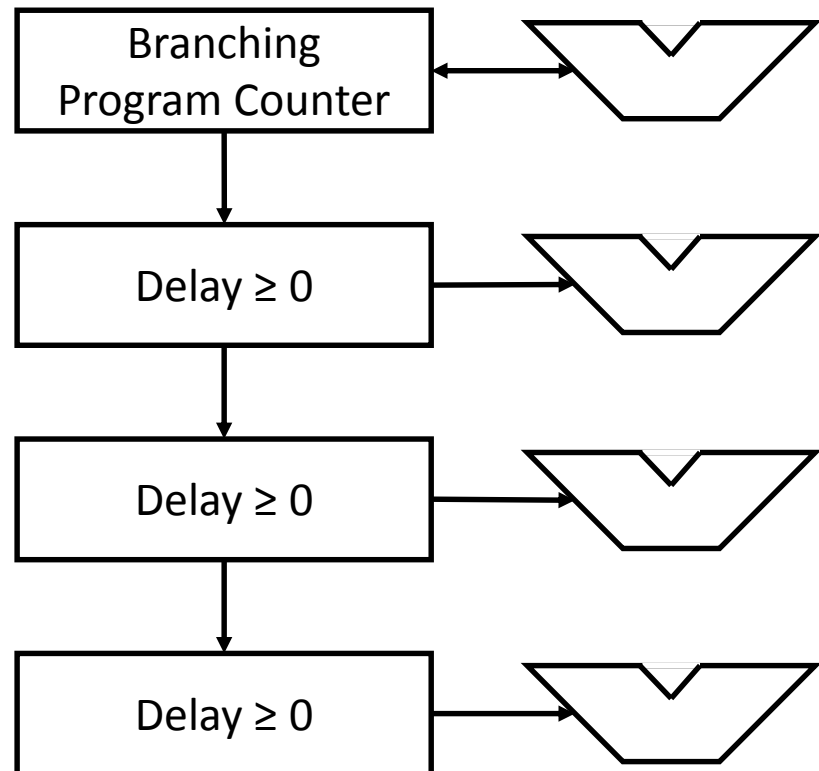

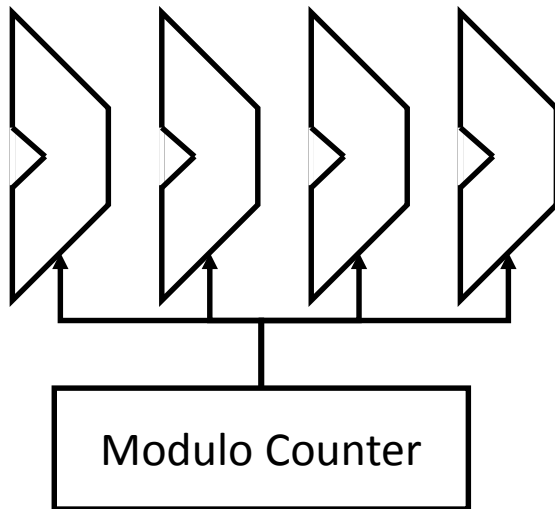

Mode 2 Operations

Control Operations

# Modulo Counter Control vs Pipelined Program Counter

# Modulo Scheduling vs Offset Pipelined Scheduling

Cycle	ALU0	ALU1	ALU2	ALU3	ALU4	ALU5
0
